Practical educational workshop on e-Governance

September 29-30, 2021

CALL FOR EXPERTS

Estonian ICT Cluster is looking for experts to conduct a practical educational workshop on e-Governance to public officials who are responsible for digital transformation in Palestine + relevant private sector/civil society representatives, altogether approx. 50-60 participants.

The **main objective** of the workshop is dissemination of e-Governance best practices – how to build secure digital solutions to create a conducive business environment, with a special focus on facilitating processes for Micro-, Small and Medium-sized Enterprises in Palestine.

The workshops' **topics** include:

- 1) Introduction and e-Governance at a glance: first steps towards information society
 - building national strategies, sector plans and legislation
 - how to ensure political will to invest into ICT and make ICT part of each sector plan
 - the role of public private partnerships

- 2) Digital society foundations: Digital Identity
 - the principles for legal and institutional framework for Digital ID
 - the structure of a unique identifier
 - privacy and protection

- 3) Digital society foundations: State registers interoperability and secure data exchange
 - the key elements and functions of base registers
 - systems integration and interoperability of base registers and secure data exchange
 - interoperability in practice

- 4) Digital Skills: building a better future leaving no one behind
 - the importance of developing digital skills on the government/public sector level
 - raising digital capacity among citizens and businesses – how to ensure the use of digital services
 - ensuring the accessibility of learning materials and communication between all the relevant counterparts
 - practical case studies: examples of digital skills learning programmes

- 5) Legal framework of e-Governance and key elements of a secure digital society
 - how to ensure favourable legal environment for e-Governance
 - efficient delivery of rule of law
 - ensuring accessibility and trust in digital services – incentives for the private sector
 - security in data management and providing secure access to all parties
 - improving rule of law, administration and governance
